

The BPL technology should NOT be licensed, because:

1. It is likely to cause widespread interference over a number of radio communication bands.
2. Radio communication over the airwaves is a precious commodity, which should be reserved for functions (such as mobile operation) for which is the only approach.
3. Once we "pollute" the airwaves with BPL, it would become very difficult to undo.
4. There are many existing alternatives for broadband connectivity; adding this one simply opens the window for another industry to make money.

By the way, I am NOT an amateur radio operator.

Thank you.
